#### **SVG Super VersaTile Gas Burners**

Designed for applications that benefit from intensive combustion gas recirculation, increased efficiency, improved temperature uniformity and substantially reduced emissions, the SVG is offered in three separate series. The 100 series has full capacity at 16 osig (6,900 Pa) while the 200 series reaches the same capacity at an air inlet pressure of 8 osig (3,450 Pa). The 'E' series has the air pressure rating of the 200 series with metric air and gas connections. The SVG burner family includes medium and high velocity tile options available in a variety of construction materials and configurations. SVG burners can be equipped with the options that best suit a customer's heating needs. The standard and high temperature models allow further tailoring of the burner to the application. The high temperature model uses higher grade heat resistant stainless steel internal components and gasket materials.

SVG burners reliably and dependably fire any standard clean industrial fuel gas over a wide operational range.

**Burner Performance.** The above chart illustrates the excellent stability and ignition characteristics of the SVG burner. Its ability to operate from very high excess air (XSA) to excess fuel (XSF) with a very high turndown range make it ideal for a variety of control schemes including pulse firing, on ratio modulation, fuel only modulation as well as a combination of these methods.

Super VersaTile Gas Burner

Edition 02-13

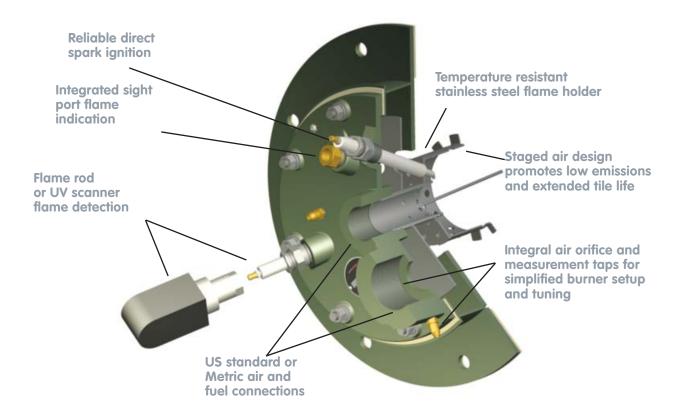

- The widest range of performance capabilities available in the industry
  - Low emissions design (NOx, CO, and VOCs)
  - High turndown capability
  - High excess air capacity
  - Direct spark ignition
- Model and option configurations to meet the combustion needs of your application
  - High and low combustion air pressure models
  - Ambient and preheated combustion air models
  - Combustion tile velocity and materials options
  - US standard or metric air and fuel connections

# Refractory Tiles - Round, Square and Square Slotted

Ideal for hard and fiber-lined chambers up to 2800°F (1540°C) and preheated air up to 900°F (480°C).

Refractory tiles come with a customizable tile mounting flange. Location can be specified at time of order.

New 'Cast in Place' (CP) tile bodies available.

Make your own high or medium velocity tile in your chamber. Your refractory, your chamber, your tile. Ideal for export projects.

## . . . . . . Alloy Tiles - High and Medium Velocity . . . . . . . . .

High temperature alloy is compact and light-weight. Ideal for hard and fiber-lined chambers up to 1900°F (1040°C) and preheated air up to 500°F (260°C). Not for use in fuel rich applications. \* Consult factory.

## . . . . . . . . . . . High Velocity Ceramic Tile . . . . . . . . . . . . . . . .

Silicon carbide material is compact and light-weight. Ideal for fiber-lined chambers up to 2500°F (1370°C) and preheated air up to 900°F (480°C).

High temperature models for preheated combustion air to 900°F (480°C).
