

Identifying New -03 Version Veri-Flames

All Veri-Flames with a date code of 0748-03 and later are new versions that are not subject to the safety advisory. The -03 is a revision code, so all units with -03 and later are considered outside the range of the affected lots in the advisory.

Starting with date code **0802-03**, There is a black ink stamp 03 at the bottom front of these units to signify that they are a version 03 and are not affected by the advisory.

Some early units with the date code **0748-03 through 0801-03** may not be stamped on the front. If the label on the back of the unit shows -03 after the 4-digit date code, you can mark the 03 on the bottom front with a permanent marker to help with future identification.

All repaired units are marked with our gold **MODIFIED OK ECLIPSE** stickers. These are also good to use and have been converted to the new design.
