

## Application brief

**Eclipse Product:** SER (Version 3) Auto Recupe Burner

**Submitted by:** Tom Heidenreich – SMA Systems, Inc.

**Application:** Rotary Retort Furnace Upgrade

**Description:** The largest Heat Treat operation under one roof is the DaimlerChrysler-KTP facility in Kokomo, IN. Desiring to decrease their fuel expenditures, they turned to SMA Systems, Inc. to review their operation in the fall of 2002.

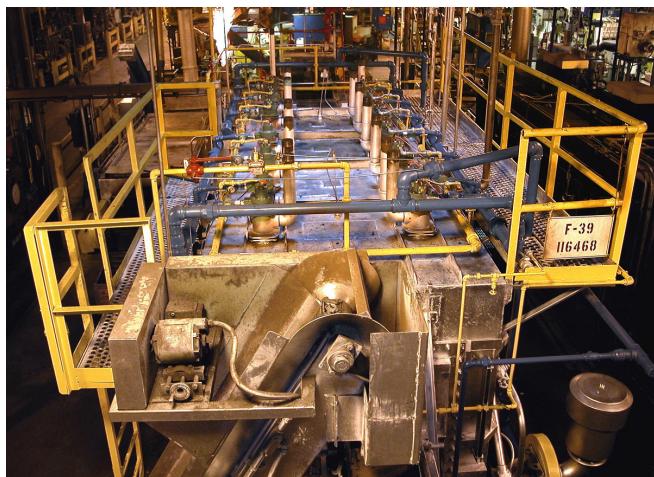

Using a proven twelve step process based on an American Gas Association publication and Eclipse's years of experience, the #5 Rotary Retort was chosen as the first furnace to be dealt with. This furnace was originally placed in service nearly a half century ago and had antiquated premix combustion equipment and controls.

During frequent consultations with DaimlerChrysler-KTP personnel it became apparent that although energy efficiency improvement was of paramount concern, there were other areas to consider for a more total project approach, especially when considering future requirements.

The project involved a wide variety of Eclipse personnel and their expertise, not limited to Sales, Engineering, Finance, Application Engineering, Technical Service, Research & Development, and Marketing.

The results were profound. Notably:

- A reduction from (28) premix Burners to (14) SER (Version 3.0) AutoRecup Burners.
- Significant safety improvements by using SER (Version 3.0) AutoRecup Burners with its nozzle mix design and electronic ignition.
- A savings of \$40,000 annually was gained with decreased maintenance associated with the older equipment.
- The SER (Version 3.0) AutoRecup Burners provided product quality improvements attributed to better temperature uniformity.
- Fuel savings of \$35,000 per month allowed payback in months instead of years.
- NOx emissions were cut in half and allowed the facility to compete for the prestigious DaimlerChrysler Corporate Environmental Improvement award.
- A significant increase in production output was realized.
- The facility is well known for their desire to train operating and maintenance personnel so a portion of the project involved classroom and furnace training.

And what's next? Not content to rest on their laurels, DaimlerChrysler-KTP is in the process of upgrading their #4 Rotary Retort Furnace (spring 2005) with other furnaces close behind. Can American industry compete? DaimlerChrysler-KTP sure thinks so.
